

CLEANING YOUR EQUIPMENT WITH H-42

You need to clean your tools everyday that you use them. Whether its in a shop or a mobile unit, condensation and the hair and dander you left on them can make them rust and loose the edge thats on them prematurely. H-42 is a cleaner and dissenfectant that has been used by the hair industry for decades. It contains a small amount of mineral oil and helps your blades

USE H-42 ON YOUR SHEARS

Spray your shears down with H-42 and wipe with a rag or paper towel. This gets the grime and stuff thats clinging to the blades. Make sure you get it in the pivot good and work the shears afterwards. This will lube, prevent rust, and dissenfect. Letting a shear rust will dull it because the edge gets rusty.

USE H-42 ON YOUR BLADES

Using H-42 regularly on your blades will keep them working properly and stay sharper longer. Why? Because H-42 has mineral oil in it and can lube your blade. It can keep it from rusting along the cutting edges so it will be sharper longer. And it dissenfects. Clean the hair out of your blade then spray it on. Work the cutter back and forth a few times to make sure it moves freely. Do this before you go home and let it sit on the blade over night to dissenfect. Wipe clean the next day and use blade oil to lube again.
